    ** Dolby Digital Pro/Plus option required for EDIUS Pro (included in EDIUS Elite)

Update History

The following issues are fixed or improved in this version.

Audio and video does not synchronize while editing K2 growing clip
Description: If a K2 GXF growing clip is placed onto the timeline via FTP, audio and video does not synchronize (EDIUS Elite only)

Preview screen shows black frame if blend keyer is disabled on clip
Description: If any timeline clip has blend keyer disabled, the preview screen turns black, even though other tracks are enabled

Burned DVD has movie title with incorrect duration
Description: If a chapter item is used for the background movie of motion menu, the chapter has incorrect duration in the burned DVD

EDIUS fails to transfer certain P2 clips
Description: EDIUS fails to transfer any P2 clip if that clip does not have audio data

Hardware encode option appears in non-supported environment
Description: "User Hardware Encoder" option appears in file exporter, even if Intel HD graphics is not running

EDIUS exports XDCAM EX clip incorrectly
Description: If you choose JVC SDHC memory card in XDCAM EX exporter, EDIUS writes XDCAM EX clip with incorrect folder specification onto the card

KNOWN ISSUES

Analysis of Stabilizer effect always runs as a normal priority job
Description: Video analysis for the Stabilizer effect always runs as a normal priority job, even when set to run as a background job
Workaround: None

EDIUS imports proxy clip as normal asset
Description: When a proxy file is created using the Create Proxy menu in the Bin, and the asset folder is then chosen to load the clip into the Bin, EDIUS imports the proxy file as a normal resolution asset
Workaround: None

DESIGN LIMITATIONS

Projects are cleared from the Most Recently Used list
Description: After upgrading to EDIUS 7.40, recent projects that were displayed in the startup screen are cleared from the list (but are NOT deleted from the PC)
Workaround: None
